- Labor saving solutions through innovative strapping and bagging equipment
- Highly durable equipment with a full technical service staff on call ensures high uptime
- Simple controls and mechanics allow customers to focus on high productivity and limited downtime
- Using Jenglo Transfer, bag is moved through highly reliable and low maintenance transfer grippers and chute systems.
- M100 unit is built to fit easily where a traditional bagging line exists.
 - It can usually be put in place of a standard bagging line with minimal effort and no building modification.
